

# *Let's Get Edgy*

## Challenges in AI Processing for Defense and Aerospace Applications

Devon Yablonski - Principal Product Manager for Sensor Processing

Embedded Tech Trends - January, 2020

# The Story of Cher Ami and the Lost Battalion

In battle, networks will be unreliable; Performance at the tactical edge is paramount

# The Battlefield is a Big Data and Temporal Latency Problem

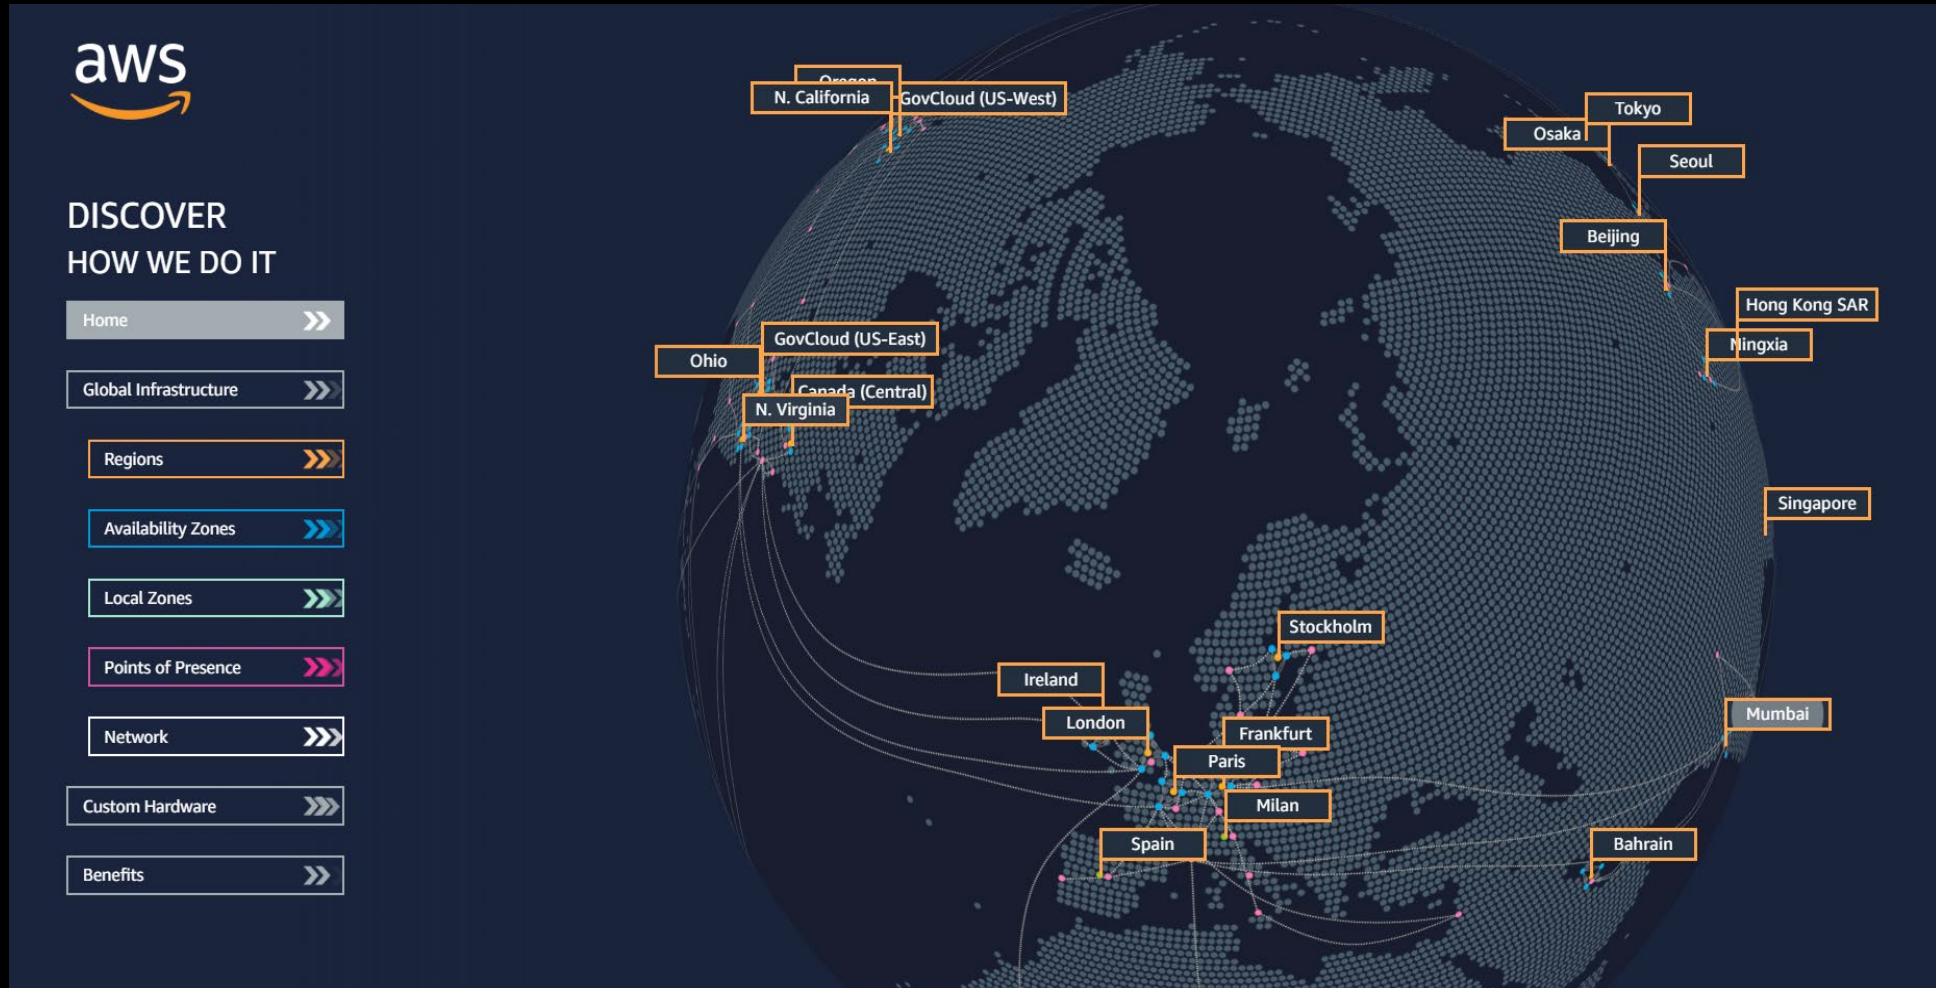

Artificial  
Intelligence  
is Redefining  
Global Power

# Artificial Intelligence Processing In the Commercial Environment...

... fails to translate to the tactical edge

# Tactical Edge Environments

**Lack of External Networks** to access cloud computing resources

**Harsh Environments** with unstable temperatures, altitude, shock, humidity

**Limited Power** provided by generators, batteries, vehicles etc.

**Space and Weight Limitations** require compact compute solutions

**Lifecycle** of 10 years or more to reduce obsolescence upgrade cost

**Mission Critical Safety and Security** where reliability, and protection of assets matter most

## Common composable data center architecture from cloud to edge

# Anatomy of a Rugged, Secure Embedded Subsystem

**SOSA**<sup>™</sup>  
Sensor Open Systems Architecture

## Cascade Lake High Density Server HDS6605

- Xeon SP – 1.5 TFLOPS via 22 cores
- 96/192/384 GB DDR4
- 100GbE/EDR IB data plane

## PCI Express Switching SFM6126

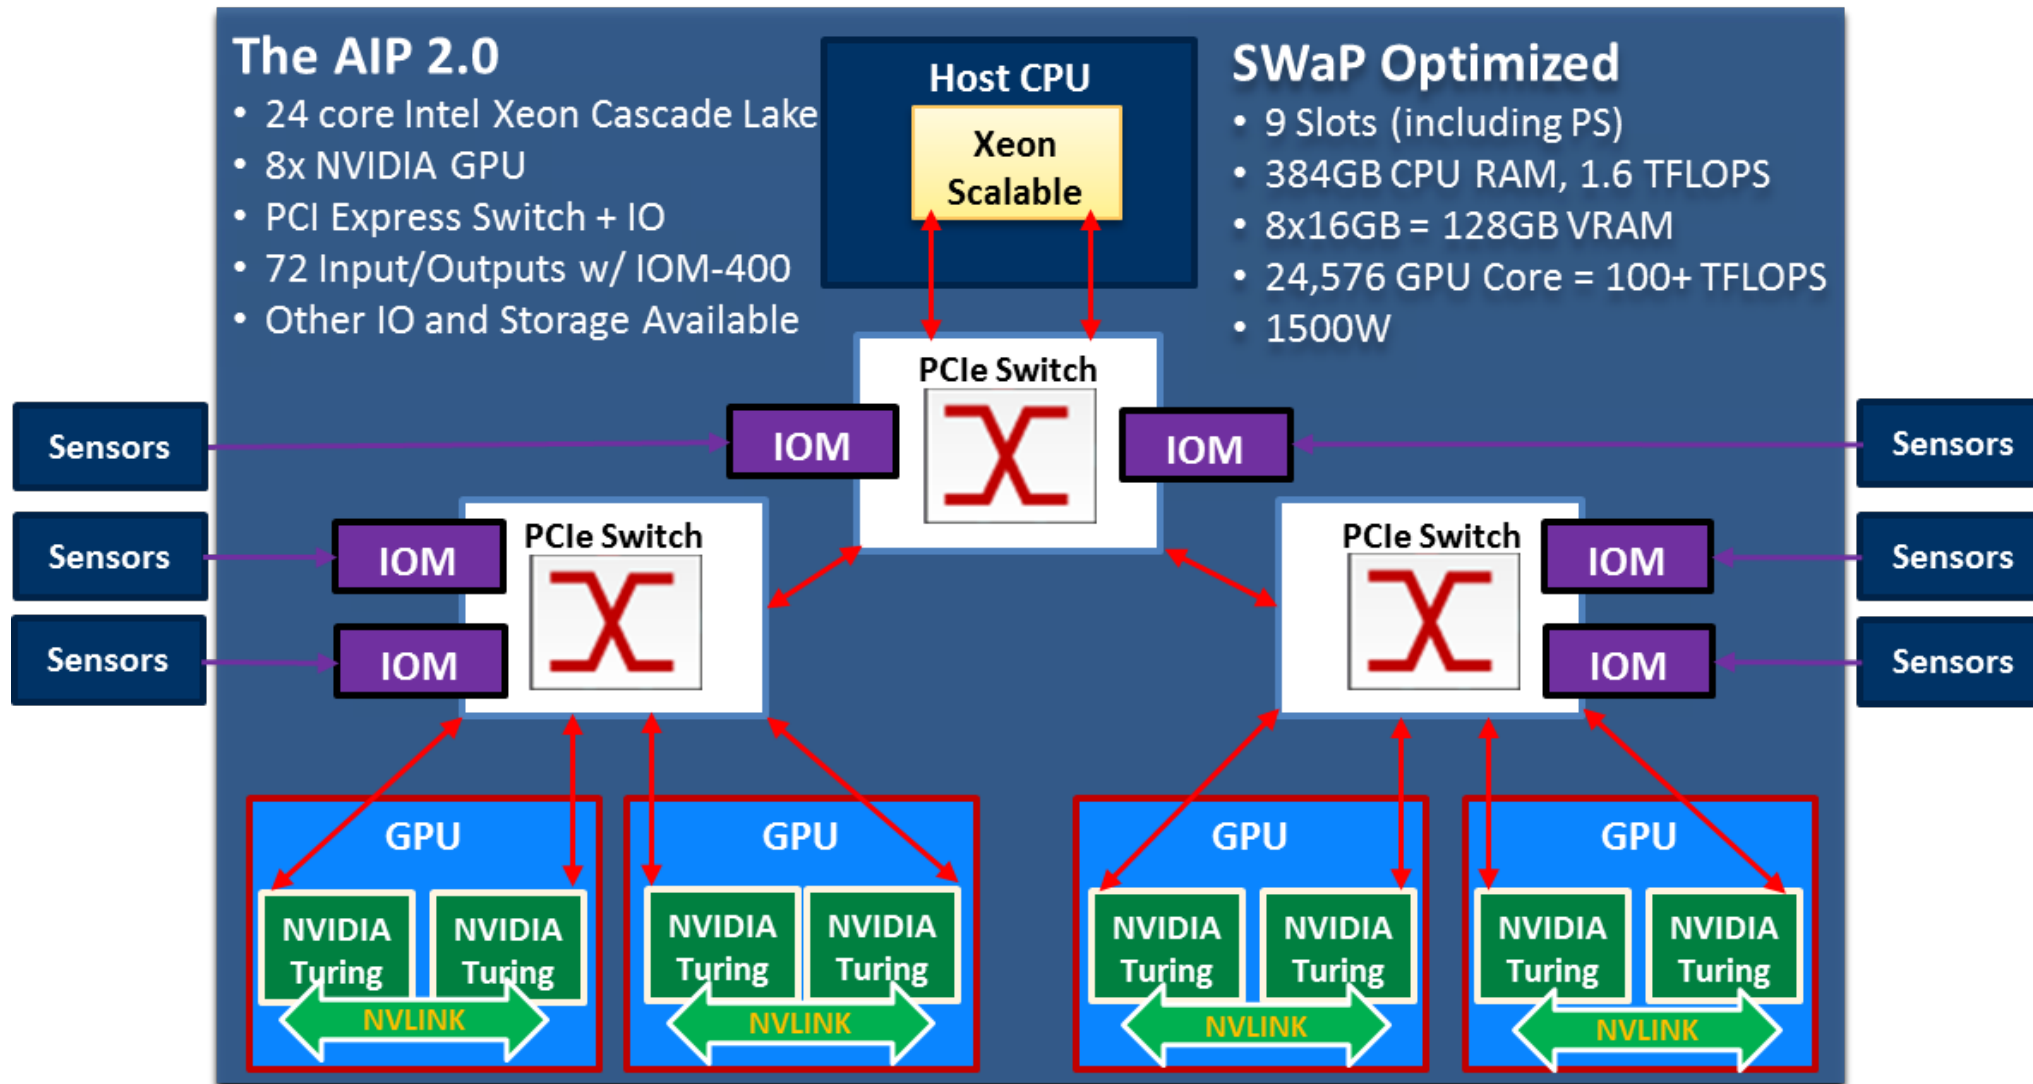

- 10GbE Control Plane Switch
- PCIe Gen3 Expansion Plane Switch
- 2x XMC Mezzanine Sites

## I/O Module IOM-400

- Low Latency Wideband I/O
- 24 TX/RX or 12 Duplex 10Gb Fiber
- Rotated Fiber Optics for VITA 66

# Composable OpenVPX AI Processing Capability

“I know not with what weapons  
World War III will be fought.”

*-- Albert Einstein*
